

HUGO Cheat Library v0.5 by Mug UK(tm)

Current version started: 24/05/2000 and finished: 11/07/2000

Current total: 78 games, 17 ISO files.

Requirements

For use with Hugo v1.27 or higher as from v1.27 onwards, there was the inclusion of the relative search method. Therefore lots more games were added to this file as well as a few extra cheats added to ones from the 0.4 version of this file.

If you want to send me your cheats for inclusion, full credits will be listed for each cheat.

General Info/Usage

Load in Hugo and load in the ROM. I have assumed you will be using all ROMS which are NOT known as bad-dumps, bit-flipped, different sizes etc.

If you are not sure then use GoodPCE first to rename the ROM before expecting my POKEs to work.

For a normal refresh value, hit F2, type in the Offset and then the value according to my chart.

For infinite (i.e. frozen) values, hit F3 and then do the same.
I only spent a few hours a day doing these cheats.

Is there anyone else out there doing some of their own - or am I on my own as per the Sega Master System, Gamegear and SC/SG machines? If you do your own, then get in touch as I'd hate to duplicate your work.

I regularly train SMS/GG ROMs as well as normal PC games. Occasionally I will also attempt to train any Atari ST games I am asked to do - which is how I started out game hacking.

Normal HuCard ROMs

ROM Name	Cheat Type	Offset	Value
Aero Blaster	Lives (P1)	7121	Freeze @ anything up to 9
Afterburner II	Lives	4275	Freeze @ anything up to 3
	Missiles	4276	Freeze @ anything up to 9
